

II. CLAIM AMENDMENTS

1-11. (Previously Cancelled)

12. (Currently Amended) An image sensing device having an array of image sensors and a filter structure disposed in relation to the image sensors, the filter structure comprising blocks of filter groups, each group having each block of filter groups being arranged in a repeating pattern adjacent to one another, each block having a filter group comprising a combination of one or more areas adapted so as to allow light to pass therethrough onto corresponding image sensors with colour filtering, and one or more areas adapted so as to allow light to pass therethrough onto corresponding image sensors without colour filtering, wherein said one or more areas adapted so as to allow light to pass therethrough onto corresponding image sensors with colour filtering comprise two colour filters, wherein said one or more areas adapted so as to allow light to pass therethrough onto corresponding image sensors without colour filtering comprise four filterless areas or non-colour filters, wherein the filters are arranged such that in each repeating and adjacent filter block there are two colour filters for every four filterless/non-colour filters.

13. (Currently Amended) An imaging device according to claim 12, wherein the two colour filters are one each of red and blue filters.

14. (Currently Amended) An imaging device according to claim 12~~claim 1~~, wherein the colour filters are arranged to be centrally located in relation to the filterless/non-colour filters.

15. (Currently Amended) An imaging device according to claim 12~~claim 1~~, wherein the arrangement of said areas in each block of filter groups in the filter structure comprises stripline formation of said respective areas.

16. (Currently Amended) An imaging device according to claim 12~~claim 1~~, wherein the image sensors are CMOS sensors.

17. (Currently Amended) An imaging device according to claim 12~~claim 1~~, wherein said one or more areas adapted so as to allow light to pass therethrough onto corresponding image sensors without colour filtering include one or more colour filters disposed at least partially thereover.

18. (Currently Amended) An imaging device according to claim 12~~claim 6~~, wherein said one or more colour filters disposed over the one or more areas adapted to allow light to pass therethrough without colour filtering comprise colour filter strips.

19. (Currently Amended) An image sensing device according to claim 12~~claim 1~~, wherein said colour filtering areas are disposed centrally in the filter group and said areas without colour

filtering are disposed in a generally square like configuration around the central colour filters.
